Practice Problems 7 Solutions

Be sure to provide an answer for each question. You may work with other students, as well as use your notes, the book, and the internet. Do make sure you understand how to solve the problems and answer the questions, as similar ones may appear on the exams.

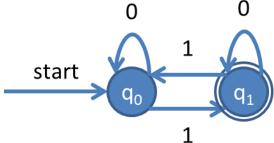

- 1. For each of the following languages, graphically depict a FSM that represents that language and describe it using the five components of an FSM. Do not forget to provide either the transition matrix or list of transition functions.
 - a. A FSM that accepts all binary strings that have an odd number of 1's. Examples: 1, 111, 010, 010010100

 $\begin{aligned} &Q\colon \{q_0,q_1\}\\ &Start\ state\colon q_0\\ &Set\ of\ inputs\colon \{0,1\} \end{aligned}$

Set of accepting states: $\{q_1\}$

Transition functions:

	0	1
\mathbf{q}_0	\mathbf{q}_0	q_1
\mathbf{q}_1	\mathbf{q}_1	\mathbf{q}_0
	0	0

b. A FSM that accepts all binary strings that contain the substring 011. Examples: 011, 0101100, 011001, 011011011

Q: $\{q_0,q_1,q_2,q_3\}$ Start state: q_0 Set of inputs: $\{0,1\}$

Set of accepting states: {q₃}

Transition functions:
